OJI TAC Corporate Profile

A Message from the CEO

Our company specializes in adhesive materials created using the latest adhesion technology. OJI TAC products are never far from daily life – like our fresh food labels for supermarkets, or address labels on parcels delivered to your door. By assisting the flow of goods and information, these products have an important role to play in our social lives. Our aim is always to “satisfy customers” and “contribute to society”. We remain constantly aware that our first duty is to satisfy customer needs to a high level, and that our products should thereby make a better contribution to society. As such, we want to provide higher quality solutions by further improving our own adhesion technology and production environment, combined with the solid background of the Oji Group.

Kaibara Manabu, CEO
OJI TAC Co., Ltd.

Three types of product linking person to person.

We manufacture products in three categories: “tack products”, basic materials for processing into printed seals and labels; “adhesive tape products”, used daily for packaging, sealing, fastening and other purposes; and “processed products”, a general name for products not included among the first two types. Around the core of these three product categories, we operate in a range of fields where adhesive materials are used, including industrial uses, electricity and healthcare as well as food products.

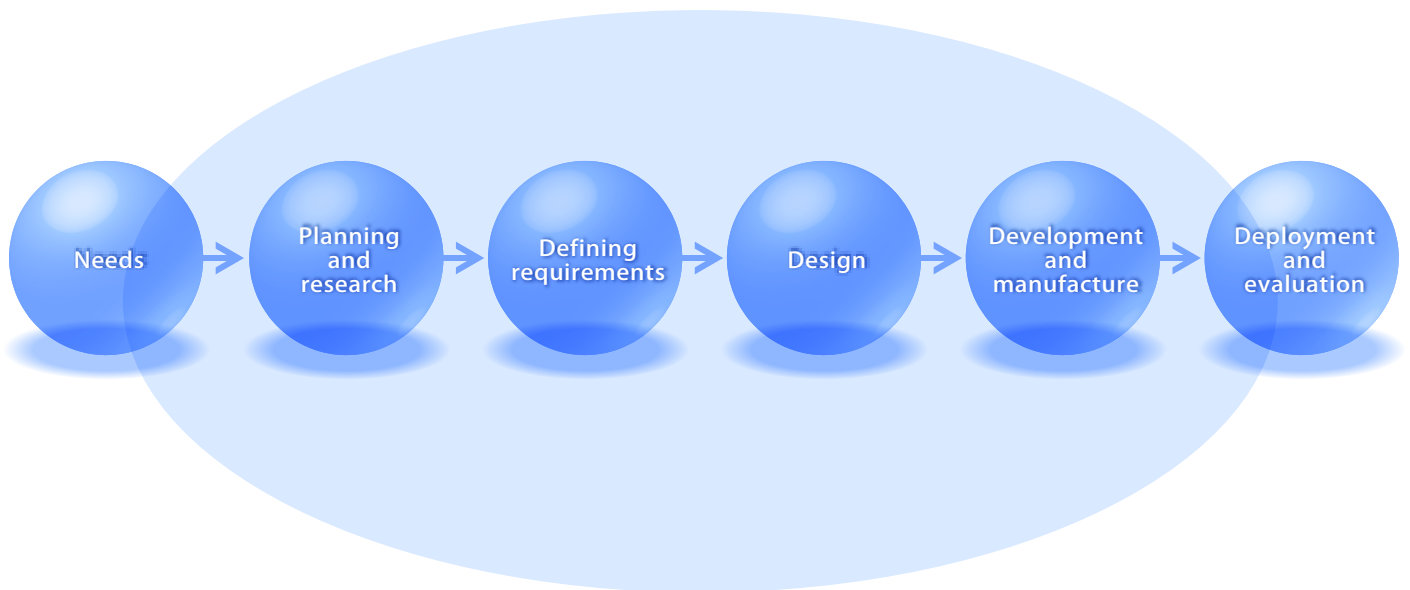

Our aim is to act as a bridge from person to person, reliably conveying society’s various “goods” and “information” while keeping abreast of the latest trends. Though remaining fundamentally aware of this chosen role, we will continue to harmonize with society and the demands of the times as we challenge new fields through our manufacture of products.

One-stop solutions with total support.

In our material development service, we place emphasis on building “trust” between customers and staff. Staff with a wealth of knowhow on adhesion technology build strong relationships of trust with customers to achieve a prompt and smooth service. They do so by providing total support for all processes, from advice and product proposals tailored to customers’ needs, all the way to final product creation. We support customers’ problem solutions with an advanced development capability backed by sophisticated research and development, as well as our long years of experience in developing adhesive materials.

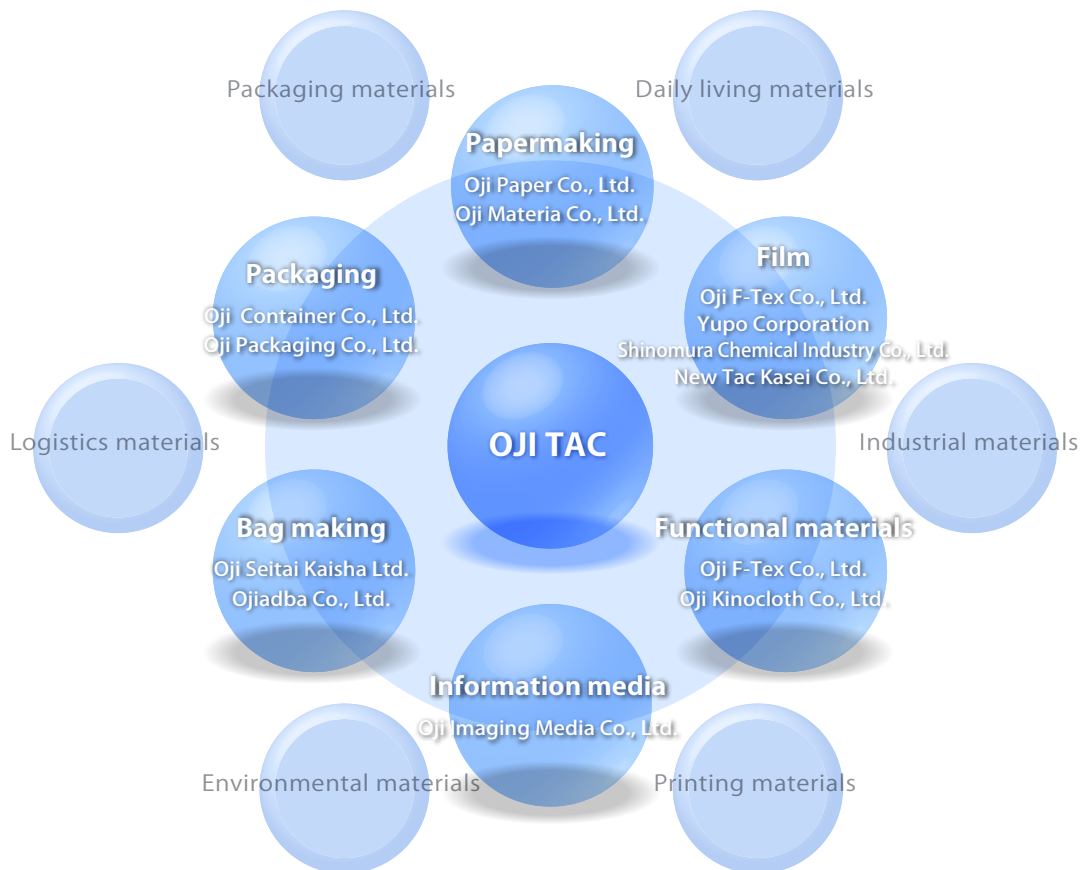

Expanding potential for development with total capability in a wide range of fields.

As a member of the Oji Group, OJI TAC actively collaborates with other Group companies engaged in various business fields.

We make an overall judgement of customers' needs, then combine our own adhesion technology with the business expertise and technology of other Group companies to achieve product development not bound by conventional frameworks.

Tack Products

New “sticking” technology to make life more comfortable.

Seals and labels surround us in our daily lives. At OJI TAC, we use the latest technology to develop and manufacture various different tack products (paper tack and film tack) as base materials for printing and processing.

■ PP Clean Tack

Though made of OPP film, PP Clean Tack is suitable for printing. It has excellent ink receptiveness and adhesion, good water resistance and adherence to curved surfaces, and can be applied to a wide range of objects including drinks and detergent containers. The adhesive is based on UV cut specifications, designed for overlaminating.

Tape Products

Targeting the next functions expected of adhesive tape.

We offer a broad lineup based around a core of adhesive tape products in daily use for “packaging”, “sealing”, “fastening” and other purposes, as well as industrial adhesive tape products such as Kraft tape, aluminum tape and masking tape.

■ 「DUALOOK」 Tape

By applying a special false adhesion layer between Kraft paper and adhesive, we have created a tape base material with a peelable upper layer. Once peeled, this adhesive sealing tape cannot be reapplied, making it tamper-proof and suitable for ensuring confidentiality.

NOTE: 「DUALOOK」 Tape is a registered trademark of Oji Holdings Corporation.

Processed Products

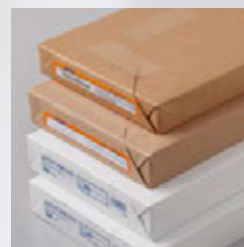

A number of highly functional products born of cutting-edge technology.

We harness advanced processing technology to provide a very wide range of high-performance products.

Among others, these include polyethylene laminated paper with excellent moisture- and waterproof properties, industrial process release liners indispensable for the manufacture of synthetic leather, and nonwoven fabrics for simple pocket warmers.

■ Release liner for industrial processes

When making enamel bags, shoes and other synthetic leather products, release liner paper is used to reproduce the surface. It has excellent surface properties and strength, and is used in a wide range of fields besides clothing and accessories. The Oji Group takes care of the whole production process from base paper to final product.

Company Profile and Network

■ Company Profile

Trading Name	OJI TAC Co., Ltd.
Head Office	Oji Holdings Bldg. No.1, 5-12-8 Ginza, Chuo-ku, Tokyo 1040061
Tel	03-3248-3450
Established	April 1st, 2000
Business History	Tack products: Started developing and manufacturing in 1960. Adhesive tape products: Started manufacturing in 1959. Processed products: Started manufacturing in 1962.
Capital	1.55 billion yen (100% subsidiary of Oji Holdings Corporation)
Employees	220 (as of March 31st, 2024)
